# Rayson

# Bluetooth ® Module

**BTM-222** 

# Class1 BC04-ext Module

#### **Features**

- Bluetooth Ver. 2.0+EDR certification
- Transmit Power up to +18dBm(class1)
- Low current consumption: Hold, Sniff, Park, Deep sleep mode
- 3.0V to 3.6V operation
- Full Bluetooth Data rate over UART and USB
- Support up to 7 ACL links and 3 SCO links
- Enhanced Data Rate(EDR) compliant for both 2Mbps and 3Mbps modulation modes
- Interface: USB, UART&PCM( for voice codec)
- SPP firmware with AT commands
- **■** RoHS Compliant
- Mini outline: 28.2 X 15.0 X 2.8 mm

### **Application**

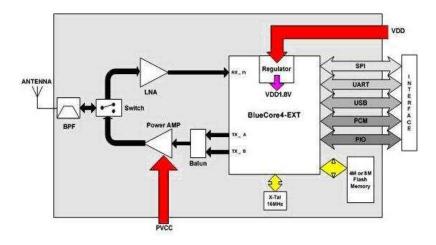

- Access point
- **Domestics and Industrial applications**
- **Serial Adapter**
- GPS, POS, Barcode Reader

### **Outline**

### **Block Diagram**

#### Note:

Measurement made using a POWER TABLE entery of TX PRE 80, INT PA63, EXT PA255. This ensures that the Bluetooth requirements for ACP and those defined by the FCC and ETSI are satisfied over the operating temperature rang of -5℃to +45℃. Although the design is capable of generating in excess of +18dBm, regulatory compliance over the full temperature range of -5℃ to +45℃ will not be satisfied if the transmit power approaches this value.

# **BTM-222 Pin Function**

Pin No.	Pin Name	Pin Type	Description
1	GND	GND	Common ground
2	PVCC	Power	Power Amp. Power Supply(3.3V)
3	AIO(0)	Bi-directional	Programmable I/O terminal , 32KHz sleep clock input
4	AIO(1)	Bi-directional	Programmable I/O terminal
5	PIO(0)	Bi-directional	Programmable I/O terminal, RX Enable
6	PIO(1)	Bi-directional	Programmable I/O terminal, TX Enable
7	PIO(2)	Bi-directional	Programmable I/O terminal, USB PULL UP, CLK REQ OUT
8	PIO(3)	Bi-directional	Programmable I/O terminal, USB WAKE UP, CLK REQ IN
9	PIO(4)	Bi-directional	Programmable I/O terminal, USB ON, BT Priority/Ch Clk output for
			co-existence signalling
10	GND	GND	Common ground
11	PIO(5)	Bi-directional	Programmable I/O terminal, USB DETACH, BT Active output for
			co-existence signalling
12	PIO(6)	Bi-directional	Programmable I/O terminal, CLK REQ, WLAN Active/Ch Data input
			for for co-existence signalling

34	SPI MISO	CMOS input	Serial Peripheral Interface clock Serial Peripheral Interface data output
35	PIO(11)	Bi-directional	Programmable I/O terminal
36	` ,	Bi-directional	Programmable I/O terminal
37	PIO(10) RF IO	Analogue	Antenna interface
38	GND	GND	
36	GND	GND	Common ground

# **SPP AT Command sets**

Α		in master mode. This command establish a connection. When it's in slave ommand will be rejected.					
11	Modifiers	Description					
(Establish a connection)	A	Connect to a Bluetooth device (It's only available when "ATD=xxxxxxxxxxx" assigned)					
	A1~A8	Connect to a Bluetooth <b>neighborhood</b> device 1~8 (ATF? Result)					
В	This comma	nd display the local device BD address					
(Display local	Modifiers	Description					
BD address)	B?	Inquire the Local BD address					
D	master role,	purpose, We can specifies the unique remote device can be connected. In it automatically inquire and search the slave even the slave is undiscoverable, the command should be as a filter condition to accept the master's inquiry.					
(Set Remote BD address)	Modifiers	Description					
uddress)	D=xxxxxxx xxxxx	"xxxx-xx-xxxxxx" is 12 digit hex symbol					
	D0 (Default)	Clear Remote BD address setting, inquire any slave in master mode or accept any master in slave mode.					
	D?	Inquire the Remote BD address setting					
E	This command specifies whether the device should echo characters received from the UART back to the DTE/DCE.						
(I1 E-1)	Modifiers	Description					
(Local Echo)	E0	Command characters received from the UART are not echoed back to the DTE/DCE.					
	<b>E1</b> (Default)	Command characters received from the UART are echoed back to the DTE/DCE.					
	E?	Inquire the current setting					
F	timeout. If a message "l	and is used to find any bluetooth device in neighborhood within 60 seconds my device is found, its name and address will be listed. The search ends with a inquiry ends, xx device(s) found."  Indie is available only when the adaptor is in the master role.					
(Find Bluetooth device)	Modifiers	Description					
ucvicc)	F?	Inquire scan Bluetooth neighborhood devices.					
Н		nd specifies whether the device could be discovered by remote master device.  g for 15 seconds afert ATH1 command to take the effect					
(Di	Modifiers	Description					
(Discoverable Control)	но	The device enters undiscoverable mode. If a pair have been made, the original connection could be connected again. But other remote master device can not discovery this device.					
	H1 (Default)	The device enters discoverable mode.					
	H?	Inquire the current setting					
_	This comma	nd is used to Inquiry the F/W version					

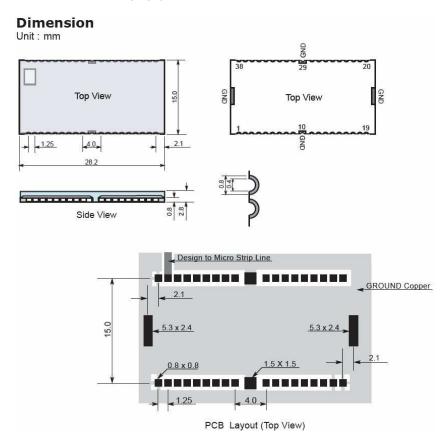

(Information)	Modifiers	Description							
	I?	Inquire the version Codes							
	This comma	nd is used to specify one or two stop bits of COM port							
K	Modifiers Description								
(Stop bits setting)	<b>K0</b> (Default)	One Stop bit							
setting)	K1	Two stop bits							
	K?	Inquire the current setting							
<b>-</b>	This command is used to specify the baud rate of COM port								
L	Modifiers	Description							
(Baud Rate	L0	4800bps							
Control)	L1	9600bps							
	<b>L2</b> (Default)	19200bps							
	L3	38400bps							
	L4	57600bps							
	L5	115200bps							
	L6	230.4Kbps							
	L7	460.8Kbps							
	L?	Inquire the current setting							
	This comma	nd is used to specify the parity bit setting of COM port							
M	Modifiers	Description							
(Parity bits setting)	<b>M0</b> (Default)	None Parity bit,							
setting)	M1	Odd parity setting.							
	M2	Even parity setting							
		r							
	M?	Inquire the current setting							
N	We can spec	inquire the current setting if its the device a friendly name using 0 to 9, A to Z, a to z, space and -, valid characters. Note that "firs space or -, last space or - isn' t permitted". name is "Serial Adaptor"

Description  Automatically connectting to a device which is assigned in "ATD" or any available device if "ATD" was not assigned.  Disable auto-connection feature, user should manually use "ATA" command to connect a remote device.  Inquire the current setting  Ind specifies the PIN number. It control to off the PIN code authorization that blish a connection without PIN code.							

	(Default)						
	P0	Turn off the PIN code authorization					
	P?	Inquire the current PIN number					
Q (Result	The command is used to determine if result Codes should be sent to the DTE/DCE. When result Codes are supressed, the device does not generate any characters in response to the completion of a command or when an event occurs.  Four Result Codes: OK,CONNECT,DISCONNECT,ERROR						
Code	Modifiers	Description					
Supression)	<b>Q0</b> (Default)	The device will send Result Codes to the DTE/DCE.					
	Q1	The device will not send Result Codes to the DTE/DCE.					
	Q?	Inquire the current setting					
R	This command specifies whether the device could be master or slave device. If change the role, the adaptor will warm start and clear all paired addresses.						
(C + D 1)	Modifiers	Description					
(Set Role)	R0	The device as master role.					
	R1 (Default)	The device as slave role.					
	R?	Inquire the current setting					
U	Y to confirm	nmand will prompt "Enter DFU mode, Are you sure (y/n)?" message, then pre nfirm the command. Then you should connect USB cable to PC and run DF DFU wizard please contact us www.rayson.com)					
(F/W upgrade)	Modifiers	Description					
	U=pass word	Pass word = RaysonUpgrade ,Go into Upgrade F/W Mode					
	Restore diffe	erent application setting and warm start.					
Z	Modifiers	Description					
(Application	Z0	Restore factory default setting (19200bps, slave ···.)					
setting)	Z?	Inquire the current setting					

# The factory settings of UART are as follows:

Baud rate: 19200 bps
Data bit: 8
Parity: none
Stop bit: 1
Flow control: H/W or none
Others: Please refer to AT Command Sets.

#### **Manufacturer Information**

Manufacturer Same as above		Same as above	
	Address	Same as above	

#### **Product Information**

Product Name	Class 1 Module	Product Category	Components
Product ID	BTM-22x, BTM-23x	Product Type	Comp-HW-Integrated
Hardware Version	A1	Software Version	N/A
Firmware Version	cyt 8unified fl bt2.0 19p2		
Supported Protocol	RF, BB, LM, HCI, HCI-USB, HCI-RS232, HCI-UART, L2CAP, SDP, RFCOMM		
Supported Profile	GAP, SPP		

#### **Reference Information**

Product Reference Document	V1.0
Bluetooth Specification	V2.0 + EDR
Test Case Reference List	TCRL EDR 2005-1-BQRB1, TCRL P1 1 2005-1-BQRB1

I certify that the Class 1Module has a Bluetooth Brand License based on the requirements as described in Section 6.2.1, Pre-Tested Bluetooth Components, of the Bluetooth Program Reference Document 1.0

San Lorenzo, California / 11.10.2005
